

Infection Control Risk Assessment (ICRA): Best Practices Awareness Training

This 8-hour ICRA Awareness Course focuses on proper procedures and communications necessary when working in an occupied healthcare facility.

Course Objectives:

Upon successful completion of this workshop, the participant should be able to:

1. Describe why healthcare facilities are unique work environments and why extra precautions must be taken while working in them.
2. Explain the functions and responsibilities of the ICRA team and how the ICRA form is used to determine a work area classification.
3. Explain the differences between positive, equal, and negative air pressure and how air pressure affects contaminants.
4. Recognize how airborne contaminants are isolated and controlled.
5. Describe the work practice procedures used in a healthcare facility.
6. Identify the agencies and organizations that oversee healthcare facilities.
7. Identify the different types of barriers and the purpose of each.
8. Describe the four methods used for mold remediation and a list of PPE and work practices needed for mold remediation in a healthcare facility.
